

Precision Network Planning Solutions

Innovation Through Spatial Intelligence

At CreoPlan, we combine cutting-edge spatial technology with decades of fibre network planning expertise to deliver innovative solutions for the telecommunications sector. Our comprehensive approach integrates advanced GIS capabilities, high-precision surveying, and detailed network design to ensure your infrastructure projects are delivered with unmatched accuracy and efficiency.

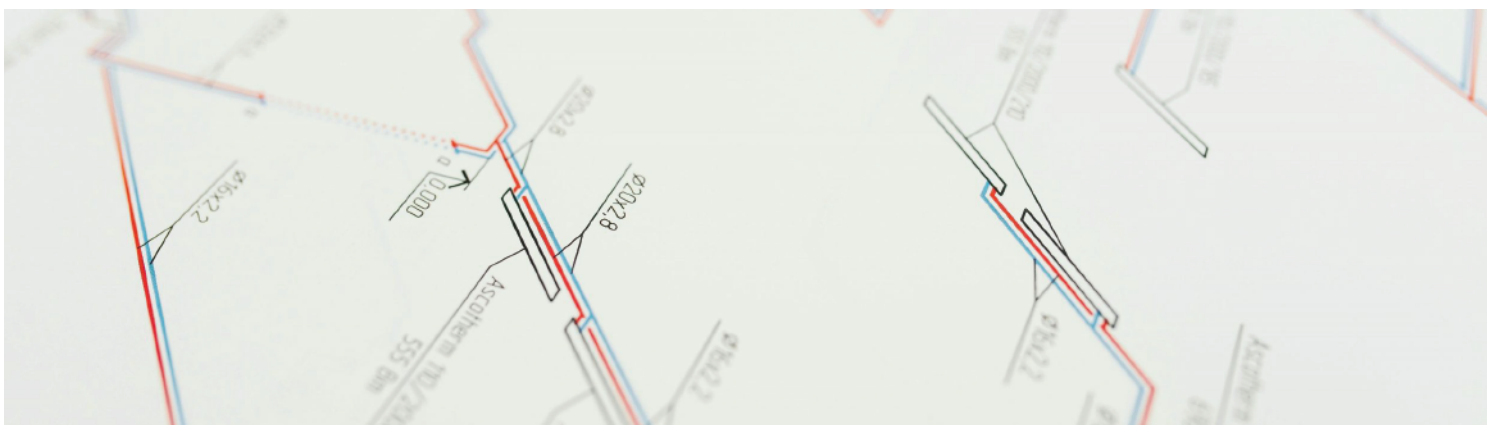

As pioneers in spatial solutions, we offer unrivalled expertise backed by innovative technology. Our experience spans both high-level and low-level network design, supported by advanced UAV surveys and LiDAR mapping, providing end-to-end project management with unprecedented visibility through our ViewMore360 and CreoViewer platforms.

High-Level Design

Our strategic approach forms the foundation of successful network infrastructure through thorough network concept development and comprehensive constraint analysis. Through strategic route planning and optimisation, we ensure optimal network performance while maintaining cost-effectiveness, providing you with a clear pathway to project success.

Low-Level Design

We transform concepts into reality through meticulous attention to detail, creating precise network layouts tailored to your requirements. Our construction-ready documentation ensures smooth project execution, while our route optimisation processes maximise cost-effectiveness, all within full regulatory compliance.

Digital Innovation

Our technology enhances every aspect of network planning:

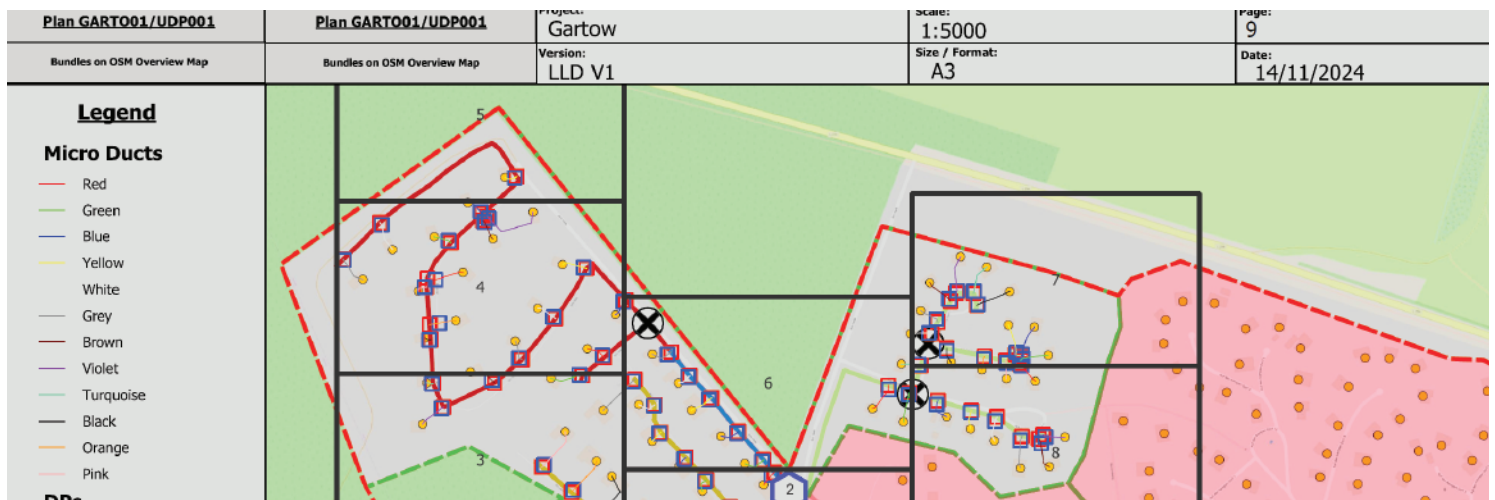

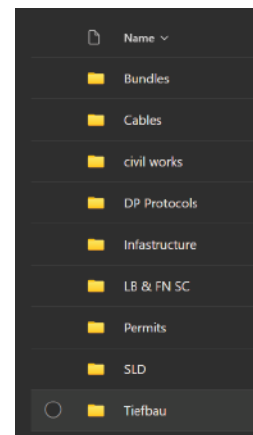

ViewMore360 delivers interactive 360° site documentation for remote assessment capabilities, while CreoViewer provides precise georeferenced 3D visualisation with accurate measurements and real-time collaboration tools.

Documentation Excellence

Civils Documentation - Our comprehensive civil engineering documentation includes detailed ground surveys, topographic mapping, and drainage assessments, ensuring your project's groundwork requirements are thoroughly covered with precise specifications and environmental considerations.

Cable Documentation - We provide detailed cable schedules, routing plans, and termination specifications, supported by clear installation guidelines that maintain the highest quality standards throughout implementation.

Transform Your Network Infrastructure

Contact our expert team today to discover how CreoPlan's innovative spatial solutions can revolutionise your network planning.
